Growth supports in Asia

We think Asia's growth is likely to moderate over the second half of 2025 under the dual pressures of **heightened U.S. tariff rates** and **weakening domestic demand**. Rising growth pressures will prompt Asian central banks to ease monetary conditions and the governments to provide greater fiscal support.

Although the uncertainties on Trump's trade war have largely passed as more trade deals are made, almost all Asian economies face much higher U.S. tariff rates vis-a-vis the beginning of the year. This came despite the tariff rates on China have eased drastically from 145% at one point and most Asian economies face lower tariff rates currently than those originally set on the "Liberation Day" (2 April) by President Trump.

Besides external uncertainties, domestic demands are also weakening across Asia. China's macro activity data, such as industrial production growth, fixed asset investment growth and retail sales growth broadly weakened and missed market expectations in

August. But that said, we think the slowdown is prompted by the government's attempt to rein in investment growth and push forward the "anti-involution" campaign to soothe deflationary pressures, which reflect the authorities' confidence in achieving this year's growth target.

Other Asian economies also face pressures on domestic demand and are trying to provide greater support. On the **monetary** side, we saw the Bank of Thailand (13 August), Bank Indonesia (20 August) and Bangko Sentral ng Pilipinas (28 August) cut policy rates and expect other Asian central banks to follow. On the **fiscal** side, India has rationalized the Goods & Services Tax (GST) regime to support consumption, while Indonesian President Prabowo Subianto has reshuffled his cabinet and appointed a more expansionary Finance Minister. South Korea, under new President Lee Jae Myung, introduced a second supplementary budget back in June. We expect Japan to loosen fiscal policy also under the upcoming new administration.

On investment recommendation, we remain constructive on Asian bonds and currencies as the Federal Reserve is expected to resume cutting policy rates in September. On equities, we

PUBLICATIONS

→ Risk management in bonds

Beware the dominance of duration and yield curve positioning.

→ Behavioral Finance:

Outsmart yourself!

Rising gold and oil prices, fears of inflation and recession – geopolitics are at the top of the agenda. Particularly in times of heightened uncertainty, there is an increased risk that our actions will be determined by behavioural patterns that are anything but rational. This is why the findings of behavioural finance are more important than ever. But even more important than self-knowledge is the ability to outsmart oneself.

→ Strategic autonomy

This module examines the transformative shifts in the global political landscape, highlighting the significant transformations within the economic landscape of Europe.

recommend markets that are domestic demand driven, open for policy rate cuts and free of idiosyncratic macro or political concerns. The Chinese/Hong Kong, Indian and Australian markets should be considered.

UPCOMING POLITICAL EVENTS 2025

2 October	EZ	European Political Community Meeting
8 October	US	FED Minutes
13–19 October	IMF	Annual Meeting
15 October	G20	Finance Ministers Meeting

The week ahead

Next week will mainly feature **Europe’s** leading indicators and the **U.S.’s** leading indicators, home sales, durable goods orders and second quarter gross domestic production (GDP) growth.

In the **euro area**, the release of Eurozone’s consumer confidence index for September on Monday will show the latest consumer sentiment. The release of Eurozone manufacturing and services purchasing manager index (PMI) for September on Tuesday will reflect the latest economic conditions under the threat of the U.S.’s reciprocal tariff hike.

In the **U.S.**, the release of the manufacturing and services purchasing manager index (PMI) for September on Tuesday shall reflect the latest business sentiment. The market will focus on signs of worsened business sentiment to gauge the extent of future Federal Reserve’s policy rate cuts. We will also see the release of the U.S. home sales data during the week where the market expects close to 4 million existing home sales and 653 thousand new home sales in August. Thursday will release the latest jobless claim data for September, durable goods sales data for August and final second quarter GDP growth data. Friday will feature the headline and core personal consumption expenditure (PCE) price indices for August and the University of Michigan consumer sentiment index for September.

Wish you all good luck, good returns.

Yours,
Christiaan Tuntono

Some of the information contained herein including any expression of opinion or forecast has been obtained from or is based on sources believed by us to be reliable as at the date it is made, but is not guaranteed and we do not warrant nor do we accept liability as to adequacy, accuracy, reliability or completeness of such information. The information is given on the understanding that any person who acts upon it or otherwise changes his or her position in reliance thereon does so entirely at his or her own risk without liability on our part. There is no guarantee that any investment strategies and processes discussed herein will be effective under all market conditions and investors should evaluate their ability to invest for a long-term based on their individual risk profile especially during periods of downturn in the market.

Investment involves risks, in particular, risks associated with investment in emerging and less developed markets. Any past performance, prediction, projection or forecast is not indicative of future performance. Investors should not make any assumptions on the future on the basis of performance information in this document. The value of an investment and the income from it can fall as well as rise as a result of market and currency fluctuations and you may not get back the amount originally invested.

Investing in fixed income instruments (if applicable) may expose investors to various risks, including but not limited to creditworthiness, interest rate, liquidity and restricted flexibility risks. Changes to the economic environment and market conditions may affect these risks, resulting in an adverse effect to the value of the investment. During periods of rising nominal interest rates, the values of fixed income instruments (including short positions with respect to fixed income instruments) are generally expected to decline. Conversely, during periods of declining interest rates, the values are generally expected to rise. Liquidity risk may possibly delay or prevent account withdrawals or redemptions.
